SUMMARY

Senior Product Manager with 9+ years **owning platform product strategy, roadmap, and budget at enterprise scale**. Took brand websites from preview to MVP launch, then owned the full API/data platform across five national real estate brands. Built product operations from scratch, navigated multi-stakeholder governance across competing brand interests, and delivered large-scale data migrations in live environments. Known for making hard scope decisions and shipping on plan.

CORE SKILLS

Product Strategy & Roadmaps • Budget & Vendor Management • Multi-Stakeholder Governance • Executive Reporting • API & Platform Products • Agile/Scrum Delivery • Engineering Collaboration • Root Cause Analysis • Product Analytics • AI-Assisted Workflows

Tools: SQL • Python • Datadog • Snowflake • Tableau • MongoDB • DBVisualizer • Studio 3T • Postman • SOAP UI • Jira • Figma • Zendesk • ServiceNow • GitHub Copilot • ChatGPT • Claude

PROFESSIONAL EXPERIENCE

Senior Product Manager — Anywhere Real Estate | 2023–2026

Owned product strategy, roadmap, and budget for the enterprise API platform powering five national real estate brands.

- Platform supporting **20M+ requests/day per API with sub-100ms P95 latency** and ~80M listings and 500+ MLS data feed integrations
- Audited all data vendor relationships across the organization — mapped products across multiple providers, eliminated redundant contracts, and negotiated consolidation to a single provider
- Delivered **\$1.3M in savings over three years** by eliminating all replaced vendor costs
- Directed complete migration off all legacy data providers within a 12-month window — mapped all data 1-to-1, curated additions and removals, and executed the full cutover in a live environment with **zero downtime**
- Served as the governance layer across five competing brand stakeholders — documented all API change requests, required cross-brand approval before implementation, and enforced platform rules that prevented any single brand's changes from breaking shared behavior
- Owned annual product budget, executive reporting cadence, and community of practice for the API/Data organization
- Led cross-functional team of **two dedicated engineering teams — an ETL pipeline team and an API development team — each under a tech lead**; maintained N+4 to N+10 planning horizon across all major initiatives with no missed deadlines
- Drove SEO expansion on own initiative — designed XML sitemaps and robots.txt for five national brand sites, improving Google indexing coverage
- Integrated AI tools (GitHub Copilot, ChatGPT, Claude) into product workflows starting mid-2025 — applied to large dataset analysis, PRD and documentation drafting, and API mock review for QA validation
- Implemented **Datadog observability** across API endpoints to monitor platform health and surface degradation proactively

Technical Product Manager — Anywhere Real Estate | 2022–2023

Brought in as founding PM for a greenfield real estate data & API platform — took it from preview state through MVP launch and established PM discipline where none existed.

- Inherited 250+ item backlog with no defined scope or launch plan — eliminated wasted work, locked MVP requirements, pitched and set the launch date, and moved remaining items to PostMVP
- Shipped the MVP launch on plan; resolved **35 systemic issues** discovered in code and data during the launch window without delaying release
- Built intake, triage, and prioritization frameworks that reduced open backlog from **250+ items to under 40** in six months
- Owned enterprise API suite covering autocomplete, filter-based search, places, addresses, listings, agents, and companies across consumer platforms
- Promoted to Senior PM within six months based on launch execution

Success Team Manager — Anywhere Real Estate | 2020–2022

Managed the L2/L3 support team while owning product decisions for core user-facing features on the Zap platform.

- Owned product logic for listing search — defined the fields shown on listings and the rules governing results across list view, map view, pins, and thumbnail cards for listings, agents, and companies
- Built the complete support process for the brand sites from scratch, including resolution paths, discovery steps, and documentation for all known data issue types
- Reduced support volume from **90 tickets/day to 30** through systemic defect resolution; reduced average resolution time from **5 days to 24 hours**
- Fostered a team culture of full ownership — a small team managing a platform used by millions with Fortune 500-level accountability

Technical Support (L1–L3) — Anywhere Real Estate | 2015–2020

Supported the Zap web application, a real estate platform serving thousands of agents across national brands.

- Diagnosed production failures across APIs, databases, and frontend systems; documented root causes and drove resolution through engineering partnerships
- Used **SQL, Postman, and diagnostic tools** to trace issues to source; partnered with engineering to prioritize fixes and track sprint work
- Wrote and modified Python scripts to correct data pipeline issues and automate fixes
